

Final Assignment - Website

B r i e f

The final project allows you to create a site that is on the topic of your choosing.

Within this class, we are concerned with the HTML and CSS that presents that design to the user. It is important that HTML/CSS is not just functioning but also clean, readable, and easy to maintain. This is done by the use of best practices (indentation, consistent naming) and the techniques you use (inheritance, descendant selectors). Your HTML/CSS should be well organized and easily understood. Avoid repeating yourself if it is avoidable.
